

A Typical Day

Habits, routines & everyday life • A1/A1+ • 60 minutes • 1-to-1

Final files: 01_Today_A_Typical_Day_Student_FINAL.pptx (17 slides) • 02_Today_A_Typical_Day_Student_FINAL.pdf (6 pages) • 03_Today_A_Typical_Day_Teacher_Lesson_Plan_FINAL.pdf (5 pages) • this report. Earlier versions are archived in *archive/REV1.0* and *archive/REV1.1*.

Final correction

CHANGE	REASON
Stage 5 (slide 9), sentence 3 changed from “She doesn’t work at night.” to “She doesn’t work on Fridays.”, marked RIGHT.	The original sentence duplicated one of the six hidden Stage 6 facts about Dr. Sarah and so partly weakened the information gap. The new sentence keeps the target form SHE + DOESN’T + BASE VERB without revealing any Stage 6 fact.
Synchronised: slide 9 teacher notes key; lesson plan Stage 5 notes (“3 right — She doesn’t work on Fridays.”) and Appendix B key; version labels inside the files changed to FINAL.	Keeps the three instructional files consistent. No other Stage 5 sentence and no other content was changed. (The student PDF does not contain the Stage 5 sentences.)

Stage 5 answer key (final): 1 WRONG — He works in a clinic. • 2 WRONG — I work from Monday to Friday. • 3 RIGHT — She doesn’t work on Fridays. • 4 WRONG — Does he work on Saturdays? • 5 RIGHT — Do you work at a hospital?

Approved REV1.1 changes (carried over unchanged)

CHANGE	WHY
Dr. Lucas removed; Dr. Sarah is the central doctor (A Doctor’s Day, What does she do?, Who is it?, Ask the questions)	Cuts the number of characters from three to two and gives the lesson one continuous story.
Stage 3 timeline now belongs to Dr. Sarah, word for word as specified (7:00 gets up ... 6:00 finishes work)	Same Look. Guess. Say it. sequence; no new vocabulary.
Stage 6 facts replaced with six NEW facts not visible on the timeline (15 patients a day • not on Sundays • not at night • appointments in the afternoon • watches TV after work • bed at 11:00). Question frames use your wording.	The original Stage 6 facts (hospital, 7:30, 12:30, 5:00) contradicted her Stage 3 day and were largely already visible. Resolved with you mid-revision; this keeps a genuine information gap.
Dr. Ben kept as the only secondary character, labelled “Dr. Sarah’s colleague”, used only in Stage 8 Round 1; teacher-only facts exactly as specified	A meaningful relationship instead of an unrelated third person.
Stage 7 USE prompt: “Tell me about a colleague.” (+ optional prompts in the notes)	Keeps the practice in a working-life context with 3rd-person -s.

Stage 8 notes and plan: SUPPORTED → PERSONALISED → INDEPENDENT; Round 2 = choose 3–4 questions + natural follow-ups (with examples); Round 3 = 2–3 minutes of extended speaking	Makes Round 2 a conversation rather than a questionnaire; no new grammar.
Stage 9 notes and plan: BEFORE SHOWING — use real errors; one at a time; “Is it right? Can you fix it?”; never more than one target error per sentence	Makes the delayed-correction procedure unambiguous.
Stage 10: exit task described as a short 4–5 sentence check, distinct from Round 3; “next time” teaser reduced to one small line, “Do not teach this now.”	The exit task now clearly measures the main aim; the preview can’t be mistaken for lesson content.
Teacher plan, Stage 5: the wrong note (“accepting 4 as right”) replaced with “If the student accepts sentence 4 as correct, point back to DOES + HE + WORK and elicit the correction.” Key: 1 wrong · 2 wrong · 3 right · 4 wrong · 5 right	Removes a factual error.
Student PDF p5: every blank is an explicit line (I see about ___ patients a day. / I don’t ___ on weekends. / He / She ___ every day. / He / She doesn’t ____.)	Incomplete sentences no longer look like English mistakes.
Student PDF p6: explicit blanks in all five items; answer key moved to a separate dashed-line block (“check after you finish”)	Clear task, clearly separated key.
Student PDF p4: note areas labelled “My notes during the lesson”; the Dr. Ben card says “Dr. Sarah’s colleague”	Makes their purpose explicit, so they don’t read as grammar exercises.
Student PDF p1–2: example sentences that hinted at Stage 6 or Round 1 answers were changed (lunch at 12:30 → 1:00; bed at 11:00 → 10:30; appointments in the afternoon → morning; “She works at a hospital” → “My colleague works at a hospital”)	Prevents the student materials from leaking information-gap answers.
Slide 5 question cards: 17 pt → 16 pt; slide 17 teaser in the muted brand tone	Removes one line wrap; keeps the teaser small but legible.

What was intentionally preserved

17-slide structure · 10-stage progression · 55-minute core timing + about 5 minutes of flexibility · main aim · guided discovery (slides 7–8) · Right or Wrong items · information-gap mechanics (answer only what is asked; facts never on screen) · pronunciation NOTICE → LISTEN → REPEAT → USE with works /s/ · lives /z/ · watches /iz/ · Doctor vs. Doctor questions on screen · delayed correction · exit prompt and checklist · error log · teacher-only appendices · visual identity, typography, palette, icon style and timeline visuals. No grammar, stages, activities or vocabulary were added.

Final checks performed

CHECK	RESULT
Cross-file consistency (scripted, rerun after the correction: 31 checks across the PPTX slides and notes, the student PDF and the teacher PDF)	31 passed · 0 failed. Covered: Stage 5 sentence 3 and the full answer key in slide, notes and plan; old sentence absent everywhere; other Stage 5 sentences unchanged; no REV1.1 labels inside the final files; character names (no “Lucas” anywhere); Ben only on slides 13–14; Stage 3 timeline identical in all three files; Sarah and Ben teacher-only facts identical in notes and plan; no old Stage 6 facts anywhere; answer keys; stage timings (4·5·7·7·5·7·3·10·5·2 = 55); slide count; pronunciation prompt; Round 2 / Stage 9 / exit / teaser instructions.
Answer leakage / information-gap protection (rechecked after the correction)	Strict scripted search, with no exceptions, for all six Stage 6 facts and all Dr. Ben facts in every student slide and every student PDF page: none found . The six Stage 6 facts appear only in the slide 10 teacher notes and the teacher plan. Generic grammar examples that use the same structures (e.g. “He doesn’t work on Sundays.” on slide 7) are not presented as information about Dr. Sarah.
Language QA (scripted + manual)	Pattern search for missing 3rd-person -s, an auxiliary + -s verb, I/you + -s, “I am + verb” and “he/she don’t” across all three files: 35 hits, each checked by hand. All are the lesson’s deliberate error examples (slides 8, 9 and 16, plus the plan), question frames with a “does” gap, or “Does he/she work?”. No unintended errors. Spelling, punctuation, capitalisation and typographic apostrophes were reviewed in the renders.
Visual / production QA	All 17 final slides and all 11 final PDF pages were re-rendered (LibreOffice for the PPTX, Chromium for the PDFs) and inspected: no overflow, clipping, missing characters or duplicate text. The PPTX passed OOXML validation. No shape outside the 0.55 in safe margin. Colours are limited to the library palette (#0B1440 #141E52 #F44904 #FAF7F2 #F3EFE6 #5B6088 #DDD6C7 #B7AFA0). Fonts are limited to Poppins, Hanken Grotesk and JetBrains Mono (no fallback fonts in either PDF).
Pedagogical QA (review against section 25)	Student talking time is dominant (teacher talk only in elicitation and short feedback) · grammar discovered, not lectured · controlled (stage 5) before freer (stage 8) · both information gaps are genuine · answers never on screen · correction concentrated in stages 5 and 9 · real errors used in stage 9 · the exit task measures the main aim · 55 + 5 minutes · no grammar added.

Remaining limitations

- **No photography.** No photo source was reachable from the production environment, and the brand forbids AI-generated people; the doctors use the approved monogram and timeline system. A real editorial photo can be added to slide 1 or 4 without layout changes.
- **Official logo** is the library’s 200 px JPEG with its background made transparent (not redrawn). Replace it with a high-resolution master when one is available.
- **Fonts are not embedded in the PPTX.** Install Poppins, Hanken Grotesk and JetBrains Mono on the presenting machine.
- **Slide 16** needs the teacher to type the student’s real errors during the lesson (the backup examples are pre-filled).
- **The “watches” sound is written /iz/** on slide 12 and in the PDFs because none of the three brand fonts contains the IPA symbol for that vowel (small capital I); using it would force a non-brand fallback font. This was the approved REV1.0/REV1.1 treatment and was not changed.
- Rendering was verified in LibreOffice and Chromium, not in Microsoft PowerPoint itself.
